

Jaw Crushers and Disk Mills - classic line

IDEAL FOR

**PRE- AND FINE-GRINDING OF HARD AND
BRITTLE MATERIALS IN THE AREAS**

- GLASS AND CERAMICS INDUSTRY
- MINING AND METALLURGY
- GEOLOGY AND MINERALOGY
- CHEMICAL INDUSTRY
- SOIL RESEARCH

classic line

**JAW CRUSHERS
DISK MILLS**

QUALITY MADE IN GERMANY

FRITSCH is more than just a brand: It is backed by a strong, medium-sized, family business in its fourth generation, which has been firmly embedded in the region since 1920 and globally active for decades. All FRITSCH-products are produced according to strict quality criteria, and our entire production is in-house. The innovative ideas of our development department are inspired by the close relationship with our customers and their practical work in the lab. Satisfied customers worldwide count on our quality, our experience and our service. This makes us proud and motivates us.

FRITSCH. ONE STEP AHEAD.

FAST COMMINUTION OF HARD AND BRITTLE MATERIALS

The compact pre-crusher

- **FRITSCH Jaw Crusher PULVERISETTE 1** 4-7

Ideal as the classic workhorse for pre-crushing of brittle materials in the areas of mining and metallurgy, chemistry, geology and mineralogy, glass industry, ceramics industry, rocks and soils.

High final fineness for large quantities

- **FRITSCH Disk Mill PULVERISETTE 13** 8-11

Particularly ideal for medium particle sizes in the areas of mining and metallurgy, glass industry, ceramics industry, soil research, rocks and soils.

Powerful combination – pre- and fine-crushing in a single step

- **FRITSCH Jaw Crusher PULVERISETTE 1 and Disk Mill PULVERISETTE 13** 12-13

Ideal for fast, continuous pre- and fine-grinding of large quantities, including coarse materials, down to analytical fineness in the areas of mining and metallurgy, chemistry, geology and mineralogy, glass industry, ceramics industry, soil research, rocks and soils.

Extremely short grinding time thanks to FRITSCH technology

- **FRITSCH Vibrating Cup Mill PULVERISETTE 9** 14-17

Ideal for fast sample preparation, such as in the areas of spectroscopy preparation, ore and geology laboratories, mining and metallurgy, ceramics industry, agriculture and environmental science, infrared and x-ray fluorescence analysis.

Preparation of solid and high-quality pellets

- **FRITSCH Pellet Press** 18

Manual hydraulic Pellet Press for the preparation of pellets with a smooth, homogeneous surface for spectral analyses such as X-ray fluorescence analysis or infrared spectroscopy for elementary analysis.

Instrument	Feed size	Final fineness down to
Jaw Crusher PULVERISETTE 1, model I	60 mm	1 mm
Jaw Crusher PULVERISETTE 1, model II	95 mm	1 mm
Disk Mill PULVERISETTE 13	20 mm	0.1 mm
Jaw Crusher PULVERISETTE 1, model I in combination with the Disk Mill PULVERISETTE 13	60 mm	0.1 mm
Jaw Crusher PULVERISETTE 1, model II in combination with the Disk Mill PULVERISETTE 13	95 mm	0.1 mm
Vibrating Cup Mill PULVERISETTE 9	12 mm	0.01 mm

Pellet Press: for the preparation of pellets in a diameter of 32 or 40 mm with a pressure force of up to 250 kN; further pressing tools and automatic pellet presses with a pressure force 400 kN on request.

PULVERISETTE 1

classic line

THE COMPACT PRE-CRUSHER

- Very fast, uniform comminution
- Feed size up to 95 mm, final fineness 1–15 mm
- Extremely fast and easy cleaning
- Extremely robust even for very hard materials
- Especially simple crushing jaw removal
- Safe and dust-free operation
- Adaptable crushing jaw kinematics for higher final fineness

The compact FRITSCH Jaw Crusher PULVERISETTE 1 *classic line* is the ideal instrument for fast and effective pre-crushing of hard and very hard brittle materials – even ferrous alloys are no problem for this instrument! Choose according to your tasks: two different models for various feed sizes and sample quantities are available.

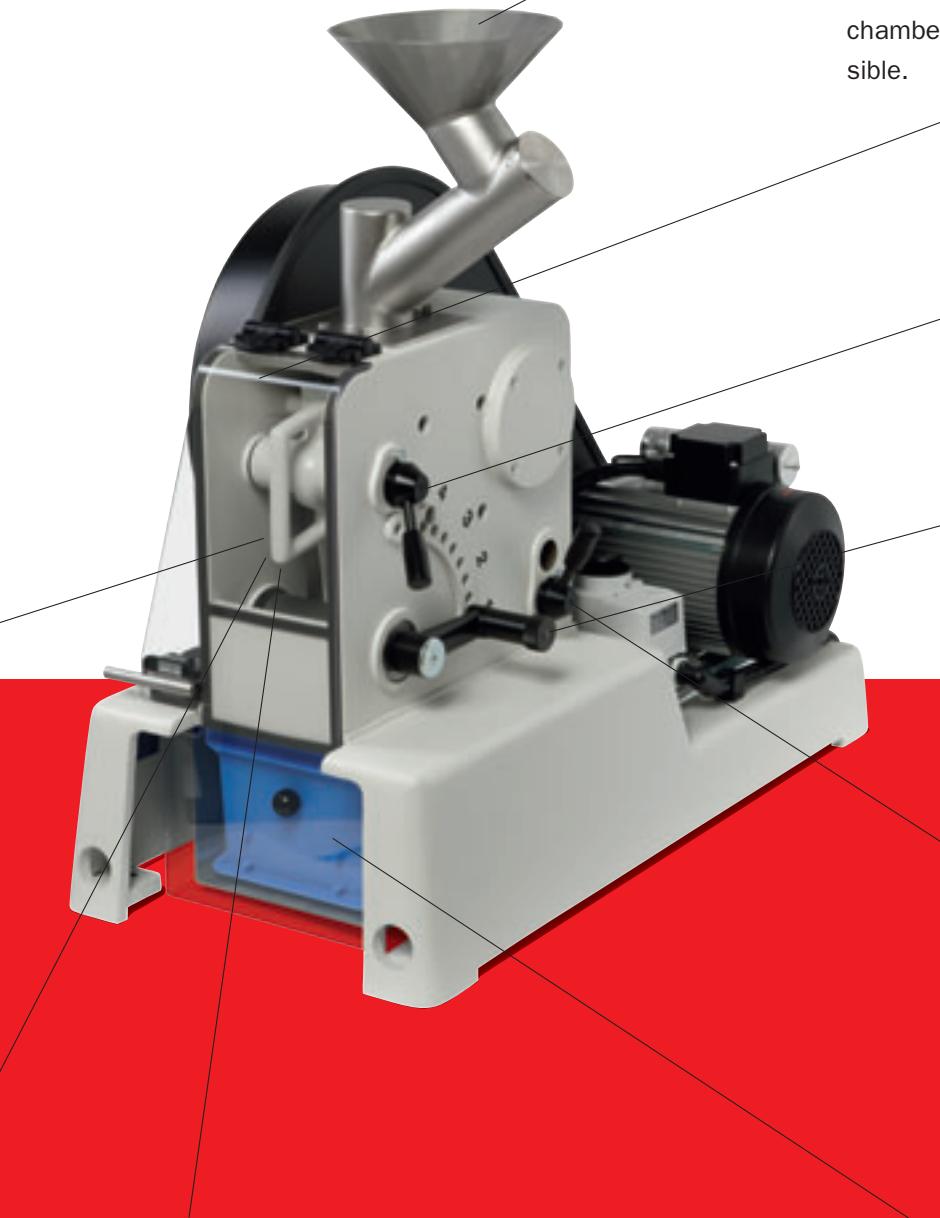

The powerful comminution of the sample takes place in the Jaw Crusher under high pressure between one fixed and one movable crushing jaw in an enclosed grinding chamber. The final fineness is easily set from the outside with the 10-stage adjustable gap width between the crushing jaws. The ground sample automatically falls downward – into a drawer for batchwise comminution or via a chute into a larger collection container for continuous operation or directly into a FRITSCH Disk Mill PULVERISETTE 13 *classic line* for further comminution.

Saves time and energy: The especially simple crushing jaw removal takes only seconds and requires only two hand motions to ensure particularly simple cleaning – fast and thorough.

The especially simple cleaning of the FRITSCH Jaw Crusher PULVERISETTE 1 *classic line* saves time and offers effective contamination protection for your samples.

View of the grinding chamber with the housing removed

The funnel of the FRITSCH Jaw Crusher PULVERISETTE 1 *classic line* is particularly **accessible, quickly and easily filled** even with larger sample quantities and **easy to clean**. Its design enables the crushed material to be automatically conveyed into the crushing chamber – blockages are practically impossible.

A practical **plexiglas cover** for optical observation of the grinding process.

For **simple and fast releasing** of the fixed crushing jaw. The crushing jaw can be removed for cleaning quickly and easily with just 2 hand motions.

Gap adjustment for setting the distance between the crushing jaws – and therefore **setting the final fineness**.

The **kinematics** – in other words, the movement between the movable and fixed crushing jaws – of the FRITSCH Jaw Crusher PULVERISETTE 1 *classic line* can be easily adapted to the breaking characteristics of the respective sample: Select the upward and downward movement of the movable crushing jaw relative to the fixed one in order to receive a sample in a narrow particle size range. For a fast comminution, please select the nearly circular motion.

The practical **collecting vessel** for batchwise comminution is particularly easy to remove.

Especially safe and dust-free: The enclosed grinding chamber prevents users from reaching inside and ensures a safe and dust-free operation of all moving parts. An integrated connection makes it very simple to combine the instrument with a dust exhaust system for automatic removal of the fine dust arising during grinding. The dust exhaust system is also very useful when cleaning the grinding parts.

PULVERISETTE 1

classic line

OUR SUGGESTION

Double the service life of your crushing jaws – they can be easily turned around on the FRITSCH Jaw Crusher PULVERISETTE 1 *classic line*.

Select the right material combination!

The crushing jaws and lateral support walls of the FRITSCH Jaw Crusher PULVERISETTE 1 *classic line* are available in 6 different materials in order to avoid undesired contamination due to material abrasion. The standard version is equipped with fixed and movable crushing jaws as well as lateral support walls made of hardened steel.

Normally, crushing jaws and support walls of the same material are used. Since the lateral support walls are subject to low stresses, however, the standard lateral support walls made of hardened steel can often be retained.

MATERIAL DATA FOR CRUSHING JAWS AND SUPPORT WALLS

Material	Main component of the material*	Abrasion resistance	Use for material to be ground
Hardened steel	Fe – Cr	Good	Brittle, hard samples
Stainless steel	Fe – Cr – Ni	Fairly good	Medium-hard, brittle samples
Chromium-free tool steel	Fe	Good	Medium-hard samples, RoHS samples
Manganese steel	Fe – Mn	Good	Hard, brittle samples
Hardmetal tungsten carbide	WC	Very good	Very hard, abrasive samples
Zirconium oxide ¹⁾	ZrO ₂	Good	Medium-hard, brittle samples, metal-free grinding
Aluminium	Al	Fairly good	Brittle samples

* At www.fritsch.de, you can find the corresponding element analyses with detailed information about the materials.

¹⁾ Grinding parts of zirconium oxide are only suitable for crushing ceramic materials, minerals, etc. and never for hard-tough samples, such as metals.

RoHS (Restriction of the use of certain hazardous substances)

For the comminution of RoHS samples – such as for the XRF analysis – crushing jaws and support walls made of chromium-free tool steel are particularly well suited.

Metal-free pre-crushing

For completely metal-free pre-crushing of medium-hard brittle samples, for example in the ceramics industry, we can equip your FRITSCH Jaw Crusher PULVERISETTE 1 *classic line* with crushing jaws and lateral support walls made of zirconium oxide and with a special PVC funnel. So you will have absolute protection against metal contamination, such as for dental ceramics.

Steel crushing jaws with a grooved surface

If required, we can equip your PULVERISETTE 1 *classic line* model II with fixed and movable crushing jaws in steel with a lengthwise grooved surface, which have a different influence on particle shape and particle size distribution. The structured surface ensures that the length-to-width ratio of the ground sample is nearly the same. At the same time, the positioning of the crushing jaws makes it possible to achieve a higher share of fine particles.

METAL-FREE

For metal-free grinding, use the practical PVC funnel.

Powerful: Coarse basalt rock crushed by the PULVERISETTE 1 *classic line* (model I) at gap position 2 to the final fineness shown in the collecting vessel on the right.

APPLICATION EXAMPLES

Mining and metallurgy	Niobium-titanium, ferrovanadium, chrome vanadium, tungsten carbide, ores, coal, slag, coke
Chemistry	Wide variety of various raw materials
Geology and mineralogy	Granite, basalt, barite, silicates and other rocks
Glass industry	Frits, glass, raw materials
Ceramics industry	Dental ceramics, steatite, fire-clay, sintered ceramics, electrotechnical porcelain
Rocks and soils	Bauxite, clinker, quartz, concrete

IQ/OQ documentation available to support equipment qualification.

FACTS AND ADVANTAGES

Model I resp. model II

Working principle	Pressure
Bearings	Needle and spherical roller bearings
Standard equipment	Instrument with fixed and movable crushing jaw and lateral support walls of hardened steel
Optimal for material type	Hard, medium-hard, brittle
Max. feed size (depending on the material)	60 mm resp. 95 mm
Min. sample quantity	20 ml
Max. continuous throughput (depending on material and gap width)	140 kg/h resp. 200 kg/h
Final fineness	1 – 15 mm
Feeding	Batchwise/continuous
Grinding parts	Fixed and movable crushing jaws
Eccentric oscillations	308 movements/min
Conformity	CE mark
Guarantee	2 years

PULVERISETTE 13

classic line

HIGH FINAL FINENESS FOR LARGE QUANTITIES

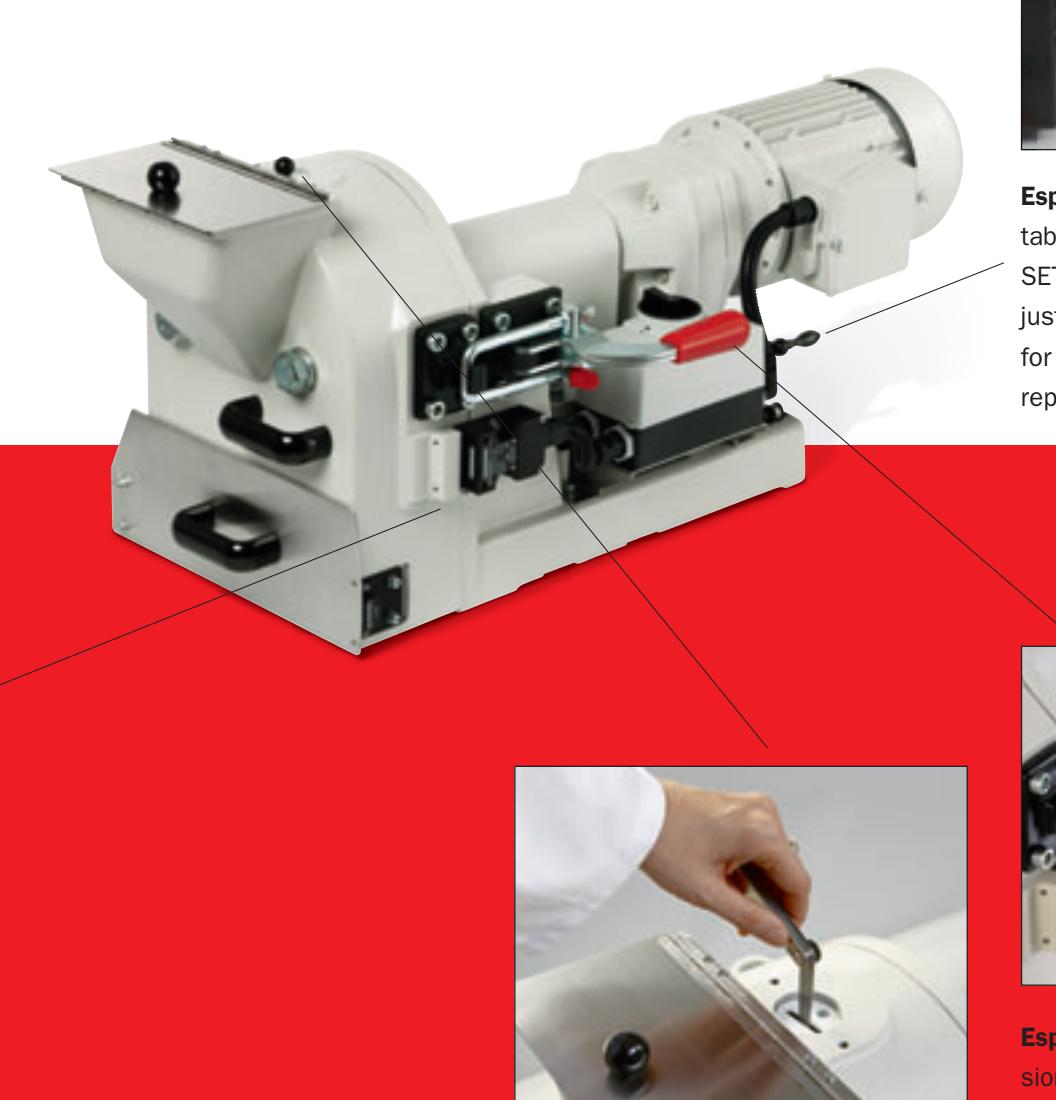

- High throughput up to 150 kg/h
- Fine grinding down to 0.1 mm
- Fast, easy cleaning
- Simple operation
- Fast grinding disk change
- Precision setting of the final fineness even during grinding
- High service life due to generously dimensioned bearings

The especially heavy and solid FRITSCH Disk Mill PULVERISETTE 13 *classic line* is the ideal instrument for fine grinding of up to 150 kg per hour of hard-brittle and medium-hard solids – even in continuous operation. The maximum feed size per piece is approximately 20 mm edge length, the final fineness is freely adjustable between 12 mm and 0.1 mm.

The material to be ground is comminuted by pressure and shearing action between two counteracting grinding disks with coarse interlocking teeth. The ground material automatically falls down through a pre-set grinding gap into the collection drawer. The desired final fineness can be defined from the outside by changing the gap width.

Especially time saving: The grinding chamber can be completely opened which makes cleaning especially simple and the grinding disks are very easily accessible for changing.

Especially accurate: The precision sliding table of the FRITSCH Disk Mill PULVERISETTE 13 *classic line* for precise gap adjustment with an accuracy of 0.1 mm – for rapid, precise operation and exactly reproducible grinding results.

Especially safe: The centrally located tension lock of the grinding chamber

Especially convenient: Easy gap width check from the outside (e.g. with thickness gauge)

- **Especially solid:** The thick-walled housing of the FRITSCH PULVERISETTE 13 *classic line* consists of recyclable grey cast iron.
- **Especially clean:** The connecting piece (optional) for a dust exhaust system really simplifies the automatic removal of fine dust occurring during grinding and is even an optimal aid for cleaning the grinding parts.

PULVERISETTE 13

classic line

OUR SUGGESTION

Lengthen the service life of the grinding disks in your FRITSCH Disk Mill by simply changing the rotational direction of the maintenance-free three-phase geared motor.

Select the appropriate grinding disks

For every FRITSCH Disk Mill PULVERISETTE 13 *classic line*, you need at least one fixed and one movable grinding disk, which are available in various materials.

Normally, two grinding disks of the same material are selected, which must always be harder than the sample to be ground.

MATERIAL DATA FOR FIXED AND MOBILE GRINDING DISKS			
Material	Main component of the material*	Abrasion resistance	Use for material to be ground
Hardened cast steel	Fe – Cr	Good	Hard, brittle samples
Manganese steel	Fe – Mn	Good	Very hard, brittle samples
Hardmetal tungsten carbide	WC	Very good	Very hard, abrasive samples
Zirconium oxide ¹⁾	ZrO ₂	Good	Medium-hard, brittle samples, metal-free grinding

* At www.fritsch.de, you can find the corresponding element analyses with detailed information about the materials.

¹⁾ Grinding disks of zirconium oxide are only suitable for grinding ceramic materials, minerals, etc. and never for hard-tough samples, such as metals.

High final fineness in minimum time

With the FRITSCH PULVERISETTE 13 *classic line*, you can achieve high final finesses in a very short grinding time. We have listed some examples here – always in reference to 1 kg feed quantity and 20 mm particle size and arranged by material types from hard to medium-hard.

Material to be ground	Grinding time (min)	Gap setting (mm)	Fineness (µm)		Throughput (kg/h)
			90 % < x	50 % < x	
Basalt	2.1	1.0		600	28
	3.5	0.1	220	60	17
Clinker	2.0	0.5	900	450	30
	10.0	0.1	220	60	6
Slate	1.4	1.0		1500	45
	2.2	0.1	300	90	27
Hard coal	3.5	1.0		800	17
	13.5	0.1	250	100	4
Limestone	2.0	1.0	1000	420	30
	6.3	0.1	210	100	10
Thomas meal (potash)	1.3	1.0	1000	350	45
	2.3	0.5	350	150	26
Pumice stone	3.5	0.5	600	250	17
	5.0	0.1	150	30	12
Glass	2.5	3.0	4000	2240	25
	3.3	2.0	2500	1600	18
	3.8	1.0	1400	800	16

The indicated results are to be considered as an orientation guide, since the chemical and physical properties (e.g. residual moisture, morphology, etc.) can vary even with the same material to be ground.

METAL-FREE GRINDING

For completely metal-free grinding of hard-brittle and medium-hard solid samples, for example for dental ceramics, we can equip your FRITSCH Disk Mill PULVERISETTE 13 *classic line* with a thorough polymer interior coating – together with grinding disks made of zirconium oxide – an absolutely reliable protection against metal contamination.

PULVERISETTE 1/13

classic line

POWERFUL COMBINATION – PRE- AND FINE-CRUSHING IN A SINGLE STEP

- Fast, continuous pre- and fine-grinding
- Compact in a single instrument
- Maximum particle size 95 mm
- Minimum final fineness 0.1 mm

For fast, continuous pre- and fine-grinding particularly of large quantities of coarse material, the combination of the FRITSCH Jaw Crusher PULVERISETTE 1 *classic line* and the FRITSCH Disk Mill PULVERISETTE 13 *classic line* is the ideal solution. Mounted together onto a rack and connected to each other by a chute, they automatically grind the material from a particle size of up to 95 mm to a final fineness of down to 100 µm – fast, easy and effective in a single step!

Select the **appropriate grinding parts and the desired configuration** from the options available for the PULVERISETTE 1 and 13 *classic line* on pages 6–7 and 10–11.

Pre- and fine-grinding, with quartzite stones as example

1 Size of the material filling into the PULVERISETTE 1
Particle size up to 95 mm

2 Intermediate results of the PULVERISETTE 1
Final fineness down to 1 mm

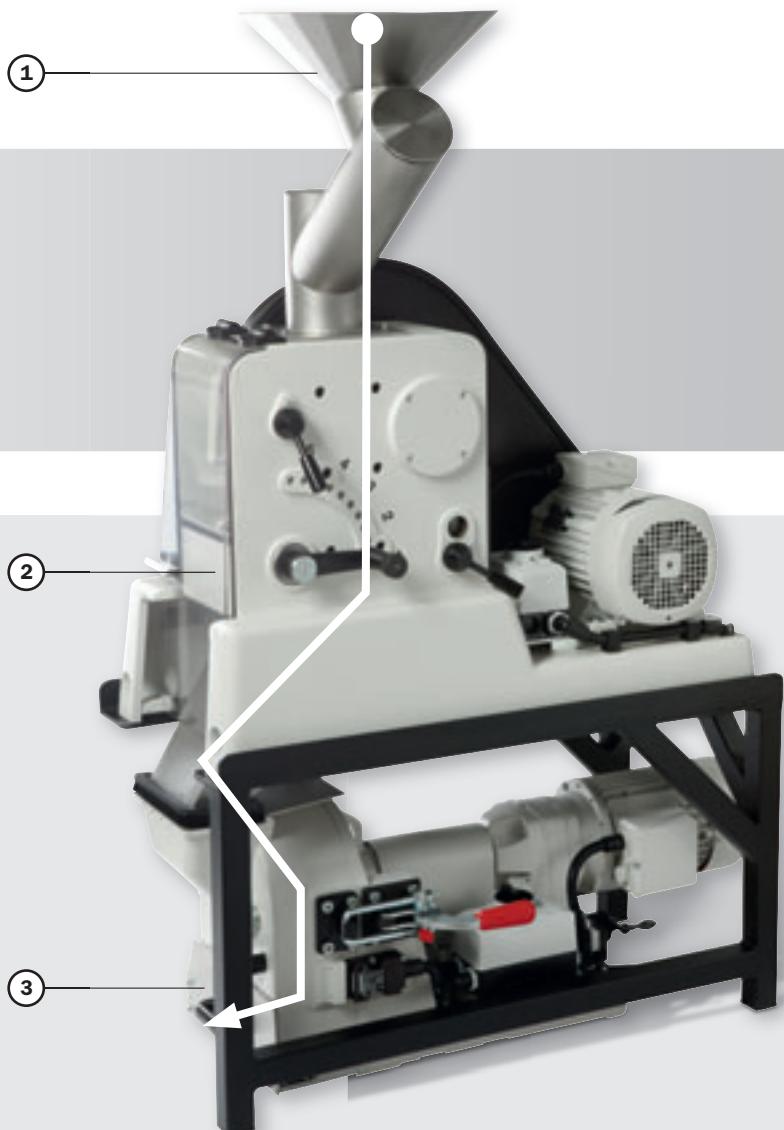

3 Final result of the PULVERISETTE 13
Final fineness down to 100 µm

METAL-FREE PRE- AND FINE-GRINDING

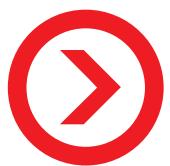

The FRITSCH-Combination is also available for completely metal-free pre- and fine-grinding. Details can be found on page 6.

A connection chute automatically conveys the pre-crushed material onward for fine grinding.

APPLICATION EXAMPLES

Mining and metallurgy	Ores, coal, coke, slags, niobium-titanium, ferrovanadium, chrome vanadium, tungsten carbide
Geology and mineralogy	Granite, basalt, barite, silicates and other rocks
Glass industry	Frits, glass, raw materials
Ceramics industry	Steatite, fire-clay, sintered ceramics, electrotechnical porcelain, dental ceramics
Rocks and soils	Bauxite, clinker, quartz, concrete, slags, gypsum, chalk

PULVERISETTE 9

classic line

EXTREMELY SHORT GRINDING TIME

- High power with well-conceived drive concept
- Extra-fast grinding with up to 1500 rpm
- Precise adjustment of rotational speed, grinding time and pause periods
- Programming and storage of grinding cycles
- Self-explanatory multilingual menu navigation
- Optimised tensioning of grinding set with anti-rotation lock
- Especially safe hood locking
- Complete soundproof lining

The FRITSCH Vibrating Cup Mill PULVERISETTE 9 offers many practical advantages in all areas in which hard, brittle and fibrous material must be ground extremely quick down to analytical fineness. The PULVERISETTE 9 is very powerful, especially quiet, simple to operate, quick to clean and has a well-conceived drive concept and the grinding set is safe and easy to tension.

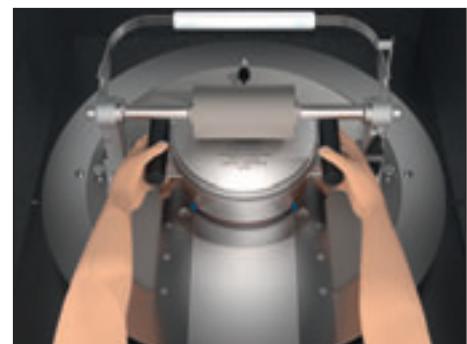

Easy working

No similar mill offers a more convenient operation: The working position is ergonomically optimised; the ease of cleaning is without match. The grinding sets are especially light, and do not have to be placed directly on the vibrating plate in the centre of the mill. The grinding set is simply placed on the guide rail and easily moved to the final position. This protects your back and saves energy and time. The grinding set is tensioned in seconds using a well-thought out one-hand lever.

Simply clever!

Especially light: The grinding sets of the PULVERISETTE 9 are especially light and are equipped with heat insulated handles.

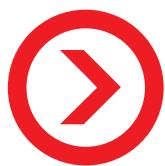

Especially ergonomic: The PULVERISSETTE 9 grinding sets, which have been considerably reduced in weight, are placed at an optimised working height on a practical guide rail and then easily moved to the final position.

Especially well-arranged: The self-explanatory, multilingual menu navigation on the LCD display for setting the grinding time precisely to the second, the pause periods and the rotational speed as well as the programming and storage of grinding cycles.

Especially intelligent: A special detector automatically detects when you use an agate grinding set for grinding and reduces the rotational speed independently.

Especially safe: Tensioned in seconds with one hand and one grip due to the rapid and anti-twist tensioning for the grinding set.

PULVERISETTE 9

classic line

Select the appropriate grinding set

Grinding sets in 5 different materials and 3 different sizes from 50 ml to 250 ml volume are available for the FRITSCH PULVERISETTE 9 – for each application the suitable one!

MATERIAL DATA FOR THE GRINDING SETS

Material	Main component of the material*	Density g/cm ³	Abrasion resistance	Use for material to be ground
Hardened, stainless steel	Fe – Cr	7.7	Good	Brittle, hard samples
Chromium-free tool steel	Fe	7.8	Fairly good	Brittle, hard samples
Hardmetal tungsten carbide	WC	14.3	Very good	Very hard, abrasive samples
Agate	SiO ₂	2.65	Good	Soft to medium-hard, brittle, fibrous samples
Zirconium oxide ¹⁾	ZrO ₂	5.7	Good	Medium-hard, brittle, fibrous samples, metal-free grinding

* At www.fritsch.de, you can find the corresponding element analyses with detailed information about the materials.

¹⁾ Grinding sets of zirconium oxide are only suitable for grinding ceramic materials, minerals, etc. and never for hard-tough samples, such as metal.

GRINDING MEDIA AND VOLUMES

Volume	Useful capacity (sample volume)	Grinding parts
50 ml	10 – 50 ml	1 puck
100 ml	30 – 100 ml	1 puck + 1 ring
250 ml	75 – 250 ml	1 puck + 1 ring

OUR SUGGESTION

Grinding sets with high density, e.g. hardened, stainless steel or tungsten carbide, reduce the grinding time.

Optimises your grinding process: the FRITSCH-motor with torque-optimised frequency converter

In the Vibrating Cup Mill, the grinding is performed by horizontal circular oscillations of the grinding set on a vibrating plate. The grinding set consisting of ring and puck comminute the grinding sample with extremely high pressure, impact forces and friction. In this form of grinding, the transmission of forces onto the grinding sample is much more important than the pure motor power. For this reason, FRITSCH as the first provider worldwide, developed for the PULVERISETTE 9 a special motor and now equipped it with an especially interference-resistant, torque-optimised frequency converter which fulfils all the relevant safety standards worldwide. It ensures that the motor output is precisely matched to the grinding material and grinding set - which optimises the energy consumption.

How to go mobile with the Vibrating Cup Mill: On request, we can supply the PULVERISETTE 9 on heavy duty wheels with arresting brake.

IQ/OQ documentation available to support equipment qualification.

The anti-rotation lock tensions the grinding set absolutely safe and the safety switch checks the firm position.

APPLICATION EXAMPLES

Mining	For processing coal, ores or minerals for physical or chemical analysis
Metallurgy	For grinding blast furnace slag or cast iron samples to determine additives
Ceramics industry	For grinding rock samples to produce raw powder to determine CaCO ₃ - and MgO-content or clinkers to study the constancy of the mineralogical structure
Agriculture and environment	For preparing samples for chemical analysis of soils, sludges or vegetable samples
Infrared and X-ray fluorescence analysis	For preparing samples in a short grinding time without contamination due to undesired abrasion.

FACTS AND ADVANTAGES

Working principle	Impact
Bearings	Ball- and cylindrical roller bearings
Equipment	Instrument without grinding set
Optimal for material type	Hard, medium-hard, brittle, fibrous
Max. feed size (depending on the material)	12 mm
Min. sample quantity	10 – 20 ml
Max. sample quantity	250 ml
Final fineness	10 – 20 µm
Feeding	Batchwise
Grinding parts	Grinding set with grinding puck and impact ring
Motor speed	600 – 1500 rpm
Useful capacity	50, 100 or 250 ml
Conformity	CE mark
Guarantee	2 years

PELLET PRESS

Ideal for high-quality pellets

- Pressing tools: 40 mm and 32 mm diameter; further pressing tools on request
- Variable pressure force up to 250 kN
- Clearly designed pressure force display in 10 kN steps
- Simple operation via hand lever
- Easy cleaning
- Single-stage piston stroke of max. 25 mm
- Automatic pressure relief in case of overstress
- Solid and compact with impact-resistant cladding

Stable and impact-resistant: The transparent polycarbonate viewing glass for optical observation of the pressing process.

Simple: By pressing the hand lever down, you create a solid, highly permeable pellet for further analysis.

The manually-operated hydraulic FRITSCH Pellet Press is ideal for fast and easy preparation of both: solid and highly permeable pellets of solid samples for X-ray fluorescence analysis or infrared spectroscopy.

The pressure force is variable up to max. 250 kN and is automatically relieved in case of overstress. The pressing tool for pellets with 40 mm and 32 mm diameter can be ordered along. Further pressing tools on request.

It's as easy as this: Fill in the sample, close the magnetically-held door and build-up the desired pressure using the hand lever - that's it.

If your pellets require binding agents for stabilisation, please contact us and we will be happy to assist.

Automatic pellet presses with a pressure force 400 kN can be delivered on request.

43.3010.09*	fixed crushing jaw, hardened steel
43.3020.09*	movable crushing jaw, hardened steel
43.3030.10	fixed crushing jaw, stainless steel
43.3040.10	movable crushing jaw, stainless steel
43.3011.09	fixed crushing jaw, chromium-free tool steel
43.3021.09	movable crushing jaw, chromium-free tool steel
43.3130.23	fixed crushing jaw, manganese steel
43.3140.23	movable crushing jaw, manganese steel
43.3050.08	fixed crushing jaw, hardmetal tungsten carbide
43.3060.08	movable crushing jaw, hardmetal tungsten carbide
43.3100.27	fixed crushing jaw, zirconium oxide ¹⁾
43.3110.27	movable crushing jaw, zirconium oxide ¹⁾

Fixed and movable crushing jaws made of steel with grooved surface on request.

Lateral support walls for model II

43.3070.09*	pair made of hardened steel
43.3080.10	pair made of stainless steel
43.3071.09	pair made of chromium-free tool steel
43.3090.08	pair made of hardmetal tungsten carbide
43.3150.13	pair made of aluminium
43.3160.27	pair made of zirconium oxide ¹⁾

* included in the basic price of the instrument; when ordering a deviating specification from the standard accessories, please specify the exact article number of the part to replace.

Order no.	Article
01.7410.00	<p>Accessories for metal-free pre-crushing for model II funnel PVC incl. clamping strips (Please note: fixed and movable crushing jaws and lateral support walls made of zirconium oxide are additionally necessary!)</p>
96.0270.00	<p>Accessories for model I and II Certification IQ/OQ documentation (questionnaire format - implementation by customer)</p>
43.9070.00	<p>Exhaust system exhaust system, dust category "M" according to DIN EN 60335-2-69 for 230 V/1~, 50/60 Hz, 1000 watt</p>
43.9055.00	fleece filter bag for exhaust system (pack = 5 pieces) ²⁾
43.9052.00	plastic bag for exhaust system (pack = 5 pieces) ²⁾
43.5100.00	<p>Accessories for continuous operation mounting rack for combined use of PULVERISETTE 1 <i>classic line</i> with the Disk Mill PULVERISETTE 13 <i>classic line</i> Select the desired configuration from the options offered for the PULVERISETTE 13 on pages 10-11.</p> <p>Conversion kit for continuous operation of the Jaw Crushers PULVERISETTE 1 <i>classic line</i>, model I and II on request.</p>

DISK MILL *classic line*

PULVERISETTE 13

Instrument without grinding disks

- 13.1030.00 for 400 V/3~, 50 Hz, 1790 watt
13.1020.00 for 200 V/3~, 60 Hz, 2100 watt
The PULVERISETTE 13 with voltage of "/3~" can **only** be operated on a three-phase supply network.
Other voltages on request!

Grinding disks

- 13.1100.09 fixed grinding disk, 200 mm dia., hardened steel cast
13.1110.09 movable grinding disk, 200 mm dia., hardened steel cast
13.1120.23 fixed grinding disk, 200 mm dia., manganese steel
13.1130.23 movable grinding disk, 200 mm dia., manganese steel
13.2000.08 fixed grinding disk, 200 mm dia., hardmetal tungsten carbide
13.2010.08 movable grinding disk, 200 mm dia., hardmetal tungsten carbide
13.2100.27 fixed grinding disk, 200 mm dia., zirconium oxide¹⁾
13.2110.27 movable grinding disk, 200 mm dia., zirconium oxide¹⁾

Accessories for metal-free grinding

- 13.1090.16 complete polymer coating of the inside of the grinding chamber
(Please note: fixed and movable grinding disks made of zirconium oxide are additionally necessary!)

Exhaust system

- 43.9070.00 exhaust system, dust category "M" according to DIN EN 60335-2-69
for 230 V/1~, 50/60 Hz, 1000 watt
13.1450.00 connecting piece for exhaust system
43.9055.00 fleece filter bag for exhaust system (pack = 5 pieces)²⁾
43.9052.00 plastic bag for exhaust system (pack = 5 pieces)²⁾

Accessories for continuous operation

- 43.5100.00 mounting rack for combined use of Jaw Crushers PULVERISETTE 1 *classic line* with the PULVERISETTE 13 *classic line*
Select the desired configuration from the options offered for the PULVERISETTE 1 on pages 6-7.

Conversion kit for continuous operation of the Disk Mill PULVERISETTE 13 *classic line* on request.

¹⁾ Remark: Grinding parts made of zirconium oxide are only suitable for grinding ceramic materials, minerals, etc. and never for hard-tough samples, such as metals.

²⁾ Remark: One pack/one piece is included in the scope of delivery of the exhaust system.

Order no.	Article
	<p>COMBINATION OF JAW CRUSHERS AND DISK MILL PULVERISETTE 1/13 <i>classic line</i></p>
	 <p>JAW CRUSHER PULVERISETTE 1 AND DISK MILL PULVERISETTE 13 IN THE DESIRED CONFIGURATION To order a combination for fast pre- and fine-grinding in a single step, order both instruments individually in the desired configuration plus the corresponding mounting rack which combines the instruments to a single high-performance grinding instrument. Select the desired configuration from the options offered for the PULVERISETTE 1 and 13 on pages 6-7 and 10-11.</p>

VIBRATING CUP MILL

PULVERISETTE 9

Instrument without grinding set

- 09.5000.00 for 200-240 V/1~, 50-60 Hz, 1470 watt
09.5001.00 for 100-120 V/1~, 50-60 Hz, 1470 watt

Grinding sets

- 48.5125.00 hardened, stainless steel, useful volume 250 ml
48.5110.00 hardened, stainless steel, useful volume 100 ml
48.5105.00 hardened, stainless steel, useful volume 50 ml
48.5525.00 chromium-free tool steel, useful volume 250 ml
48.5510.00 chromium-free tool steel, useful volume 100 ml
48.5505.00 chromium-free tool steel, useful volume 50 ml
48.5225.00 hardmetal tungsten carbide, useful volume 250 ml
48.5210.00 hardmetal tungsten carbide, useful volume 100 ml
48.5205.00 hardmetal tungsten carbide, useful volume 50 ml
48.5310.00 agate, useful volume 100 ml
48.5305.00 agate, useful volume 50 ml
48.5410.00 zirconium oxide¹⁾, useful volume 100 ml
48.5405.00 zirconium oxide¹⁾, useful volume 50 ml

Further accessories

- 93.4365.00 wheels for Vibrating Cup Mill
(1 set = 4 heavy-duty wheels, 2 with arresting brake)

Certification

- 96.0300.00 IQ/OQ documentation
(questionnaire format - implementation by customer)

PELLET PRESS

Instrument without pressing tool

- 09.9510.00 pellet press, hydraulic, manual, pressure force 250 kN

Pressing tools for Pellet Press

- 09.8040.00 pressing tool for pellets with 40 mm dia.
09.8032.00 pressing tool for pellets with 32 mm dia.

Further pressing tools on request!

Automatic pellet presses with a pressure force 400 kN can be delivered on request.
